Filtering option using Socrata

The intial page display for Most Efficient product.

1 Links to prefiltered sizes are removed here from the original page to allow users to have the ability to sort and filter in any number of combinations, as seen on p.2

2 To begin browsing, users click:
• a link either in the left column or
• the photo link in the content area of the page.
3 Both links will have the same outcome. If there are individual products to be featured, the content area could also display them along with a direct link to the product.

Filtering option using Socrata

"Refrigerators" has been clicked on the previous page and the page refreshes to display all of the Most Efficient refrigerators along with all additional filtering options for refrigerators listed in the left column.

Similar to a typical shopping site, users have the ability to display the data in a grid or a list view. Currently, the grid is displayed since the grid will show more products on the page with less scrolling. More product details can potentially be displayed in the list view since there will be more room.

Products link to individual product pages (not mocked yet) that would display more product details (features, specifications, etc)

Product Comparison is possible from this page
